

Compost Quick

How it Works

Compost Quick contains a special blend of bacteria and enzymes that have been specially selected for their appetite for organic matter such as garden and food waste.

These specially bred bacteria help to break down the organic matter in your compost quicker and more thoroughly giving you a better compost, quicker. Compost Quick will also reduce odours helping to keep vermin and pests away.

Our enzyme producing complex is temperature, and chemical resistant enabling them to grow in harsh conditions giving you the best result possible.

They have no ill effect on the environment, the only by-product from their bio-enzymatic process is carbon dioxide and water.

How quickly will they work?

If conditions are warm you will notice a reduction of odour and improvement in compost consistency within 2 to 3 days.

Severe odours caused by composting manures will take longer.

To help the bacteria thrive as quickly as possible add the required amount of Compost Quick to 1 litre of warm water 5 minutes before use and pour over compost. Mix through with fork.

Are enzymes safe?

Yes – the enzymes used in Compost Quick are naturally occurring, totally biodegradable and harmless to your family, pets and the environment.

Australian made & owned.

Other Uses

- Drains
- Septic Tanks
- Grease Traps
- Toilets
- Port-a-loos
- Waste water & grey water holding tanks.
- Sinks
- Showers
- Camp toilets
- Kitchens
- Bins
- Garbage disposal units
- Caravans
- Boats

Benefits

- Works with nature
- No effect on environment
- Better compost quicker
- Removes odours
- Safe for people and pets
- Easy to use
- Made in Australia

Product Specifications

Product Name	Compost Quick
Number of bacteria strains	7
Types of bacteria	Enzyme producing bacterial consortium
Pack Size	
Dosage rates	

Shelf Life	12 Months.
