

Drain & Septic Maintainer

How it Works

Drain & Septic Maintainer pellets contain a special blend of bacteria and enzymes that have been specially selected for their appetite for fats, grease, oils and soap scum that are the usual cause of clogged and smelly drains and poor functioning septic systems.

These specially bred bacteria and enzymes quickly liquify and then literally digest fats, oils and soap scum quickly removing the blockage and odours.

Our enzyme producing complex is temperature, bleach and chlorine resistant enabling them to grow in harsh conditions giving you the best result possible. They have no effect on the environment and the only by-product from their bio-enzymatic process is carbon dioxide and water.

Septic Systems

Septic systems are very easily thrown out of balance, the microbes needed to digest the waste entering a septic system on a daily basis can be easily 'killed off' by many of today's cleaning products, especially the caustic, chlorine and bleach based products and anti-bacterial cleaners.

Because Drain & Septic Maintainer pellets have specially selected bacterial strains which are bleach and chlorine resistant they give superior results under the most demanding of conditions, enhancing the septic or drainage systems naturally occurring microbes and keeping your system running smoothly.

Where to Use

Drain & Septic Maintainer pellets are perfect to start new, restart existing or boost poor performing septic systems. Drain & Septic maintainer pellets will quickly reduce or eliminate odours in poor performing septic systems, drain lines and grease traps. They can be used in every area of the home or industry including drains, showers, kitchens, toilets, sinks, garbage disposal units. Safe for port-a-loos, caravan and boats and anywhere you have odours or stagnate water.

Safe for all plumbing materials.

See below for dosage quantities & frequency.

How quickly will they work?

This depends on the type & severity of the blockage. If conditions are warm you will notice a reduction of odour and improvement in flow within 24 hours.

Severe blockages caused by a foreign object such as plastic, rocks or living tree roots, will require inspection by a qualified plumber prior to application. To help the bacteria thrive as quickly as possible add 1 litre of warm water to the drain before use.

Are enzymes safe?

Yes – the enzymes used in Drain & Septic Maintainer pellets are naturally occurring, totally biodegradable and harmless to your family, pets and the environment.

Australian made & owned.

Use in

- Drains
- Septic Tanks
- Grease Traps
- Toilets
- Port-a-loos
- Waste water & grey water holding tanks.
- Sinks
- Showers
- Camp toilets
- Kitchens
- Bins
- Garbage disposal units
- Caravans
- Boats

Benefits

- Works with nature
- No effect on environment
- Prevents blocked lines & pumps
- Saves money
- Removes odours
- Replaces hazardous chemicals
- Creates a bio-film keeping lines clean
- Safe on plumbing
- Safe for people and pets
- Easy to use
- Made in Australia

Product Specifications

Product Name	Drain & Septic Maintainer
Number of bacteria strains	7
Type of bacteria	Enzyme producing
Pack Size	400 gram, 600 gram , 1.2 kg
Dosage rates	Drain lines: 10g per line & leave 24 hours & repeat Septic Systems: 400g initially then 40-60g monthly Grease Traps: 250g initially then 20-30g per week Grey Water tanks: Treat as septic systems then 40-60g monthly
Shelf Life	12 Months.
