

Drain & Septic Maintainer Pellets

A fast acting enzyme based drain cleaner
& septic booster in a convenient pellet.

Product Overview

Drain & Septic Maintainer pellets contain a special blend of bacteria and enzymes that have been specially selected for their appetite for fats, grease, oils and soap scum that are the usual cause of clogged and smelly drains and poor functioning septic systems.

These specially bred bacteria and enzymes quickly liquify and then literally digest fats, oils and soap scum quickly removing the blockage and odours.

Our enzyme producing complex is temperature, bleach and chlorine resistant enabling them to grow in harsh conditions giving you the best result possible.

Where to use

Drain & Septic Maintainer pellets are perfect to start new, restart existing or boost poor performing septic systems.

Drain & Septic Maintainer Pellets will quickly reduce or eliminate odours in poor performing septic systems, drain lines and grease traps. They can be used in every area of the home or industry including drains, showers, kitchens, toilets, sinks, garbage disposal units. Safe for port-a-loos, caravan and boats and anywhere you have odours or stagnate water. Safe for all plumbing materials. See below for dosage quantities & frequency.

- ✓ Drains
 - ✓ Septic Tanks
 - ✓ Grease Traps
 - ✓ Toilets
 - ✓ Port-a-loos
 - ✓ Waste water & grey water holding tanks.
 - ✓ Sinks
- ✓ Showers
 - ✓ Camp toilets
 - ✓ Kitchens
 - ✓ Bins
 - ✓ Garbage disposal units
 - ✓ Caravans
 - ✓ Boats

How quickly will they work?

This depends on the type & severity of the blockage.

If conditions are warm you will notice a reduction of odour and improvement in flow within 24 hours. Severe blockages caused by a foreign object such as plastic, rocks or living tree roots, will require inspection by a qualified plumber prior to application. To help the bacteria thrive as quickly as possible add 1 litre of warm water to the drain before use.

Are enzymes safe?

Yes – the enzymes used in **Drain & Septic Maintainer pellets** are naturally occurring, totally biodegradable and harmless to your family, pets and the environment.
