

Pond Maintain

Bio-Enzymatic Pond & Dam water maintainer.

Product Overview

BioEnzymes BioMaintain is a unique environmentally friendly bio-enzymatic formulation that replaces hazardous traditional products used to keep pond & dam water in perfect biological condition. It has been specifically formulated to attack the organic matter that algae feeds on to grow and also reduces the amount of waste in the water generated by fish, birds and other aquatic life.

HOW DOES IT WORK?

Specially selected bacteria release enzymes that liquefy & then literally digest the organic matter keeping the natural balance in your pond or dam. The only by-products of this process are water & CO₂.

Bio-enzymatic action has been nature's way of degrading waste since the earth was formed, but until now enzymes did not act fast enough. Now with advanced chemistry, this proprietary formulation acts immediately to peptize & break up organic matter and clear pond & dam water and keep it in perfect condition.

Unlike chemical products, **Bio Maintain** will not burn the flesh or ruin clothing, and is totally safe for all aquatic life and fish.

Benefits

SAFE TO USE - Contains no corrosive poisonous chemicals colours or fragrances. Clears and cleans water naturally and quickly.

SAFER FOR FISH & AQUATIC LIFE - Will not harm aquatic life or your fish.

SAFER IF SPILLED OR SPLASHED - Contains no acids or caustics to harm aquatic life, flora or fauna.

CLEAN AIR FORMULA - Contains no VOC's to pollute the atmosphere.

SAFER FOR DRINKING WATER - Contains no chlorinated solvents to contaminate ground water.

WORKS FASTER - than other bio-enzymatic digesters because it liquefies organic matter faster.

WORKS NATURE'S WAY - Since its beginning, the earth has been cleansed of waste by bacteria & the enzymes they release. BIOMAINTAIN functions the same way, but with specially selected bacteria it works faster.

Bio Maintain is a liquid water stabiliser that works nature's way, but faster, to literally digest organic matter that algae feeds on by using bio-enzymatic technology.

Uses

For cleaning and clearing pond and dam water after use of BioEnzymes BioClear pond and Dam water clarifier.

Directions

BIO MAINTAIN IS BEST USED THROUGH AUTOMATIC DOSING MACHINE BUT IS NOT TOTALLY NECESSARY.

THIS IS A CONCENTRATED PRODUCT : 50-80 Mil CFU/ml

STORE IN A COOL DARK SPOT. SHAKE WELL BEFORE USE.

DIRECTIONS

Mix the required amount of **Bio Maintain** with 1lt to 5lt of pond or dam water and slowly add to the pond in an area where the water is circulating.

If the pond is a still pond agitate and airate the water as best as possible for several minutes after application.

APPLICATION RATES

80ml Treats up to 2000 Litres

160ml Treats up to 4000 Litres

350ml Treats up to 8000 Litres

800ml Treats up to 15000 Litres

Apply **BioMaintain** every one to two weeks for best results.

For initial treatment of a new pond, double the application to seed your pond filter and clear the water quickly.
